Subject: Perinatal Preview Report Available

Good Afternoon

The CheckPoint Preview Report has been updated to show your hospital's data for the four quarters ending **2023Q2** for the following measures.
This new data will be released to the public reports on 10/23/2023.

• Cesarean Section (PC-02)
• Early Elective Deliveries (PC-01)
• Exclusive Breast Milk Feeding (PC-05)
• Newborn Screening Transit Time (Three Day)
• Term Newborn Complications (PC-06)

Select Hospital Login, enter your username and password, click Preview Reports on the central panel, then expand the Birth measure family in the report.
A "NDA" (No Data Available) report code indicates that a hospital does not have the ability to report a particular measure. Please let me know if your report shows NDA, but your hospital can report the affected measure, or if it shows DNR when NDA would be more appropriate.

A "DNR" (Did Not Report) or "IP" (In Progress) code indicates that one or more quarters' data are missing. If your preview report shows missing or inaccurate data, you can enter or revise it at any time. Please use the Microsoft Edge web browser, Log-in and select Data Entry in the central panel. Choose your hospital from the list and then the year-quarter. Expand each measure section, add your data, then press <Save> when you have completed data entry. You can confirm that your data was saved by re-opening the data entry form for that period. If your data was saved, they will be visible.

The due date for 2023Q3 data for hospitals performing manual data entry, and for PeriData.Net subscribers to enter their data from a different vendor is 1/3/2024.

Let me know if you have any questions or concerns,
