

WHA Quality Hosts AI in Healthcare: Navigating Risks and Opportunities

Join WHA's Quality Team Jan. 29, 2025, at 12 p.m. for a thought-provoking webinar exploring the complex world of Artificial Intelligence (AI) in health care. While AI promises significant advancements in productivity and capabilities, it also brings unique risks that must be managed in innovative ways. AI's reliance on data, coupled with its socio-technical nature, creates challenges that can affect both its outcomes, and the trust placed in it. This webinar is presented by DNV Healthcare, but your hospital does not need to be DNV-accredited to register and attend.

In this session, DNV experts will guide you through the key considerations for adopting AI tools in health care, focusing on the critical need for a new risk management approach. Learn how to navigate emerging regulations, identify trust-building strategies and ensure practical assurances for AI adoption in health care settings.

Don't miss the chance to gain insights on how to leverage AI confidently and responsibly, enabling you to harness its full potential while managing associated risks. Register [here](#) to secure your spot.
