

## Register for Health Equity Regulation Hot Topics Webinar, June 29

CMS has mandated new measures for the Inpatient Quality Reporting (IQR) program that focus on providing equitable care for all patients. The new measures are the Hospital Commitment to Health Equity measure (required in 2023) and two Social Drivers of Health measures (required in 2024).

The health community at large is committed to achieving equitable care, but it can be difficult to know where to start. In this webinar, presented by Medisolv, the three new measures will be reviewed. You will learn the requirements for each, the populations and calculations, as well as the timeline for mandatory reporting.

### Learning Objectives:

- Identify the goals and differences of the three new measures
- Review the timeline for these measure requirements
- Understand how these new measures will be scored
- Learn our top tips for collecting and reporting these measures

The webinar will be held Thursday, June 29 from 11 a.m. – 12 p.m. Register [here](#).
